

## Annotations

**Calls for Artists** is the main page and the main reason why this app was created.

**1 Filters/Sort by:** by default this page will list all **Most Recent** calls/posts first. There isn't enough space for all choices so I picked the most common ones (as per other apps). **Trending** will filter the most viewed and commented on posts and **By Category** will give options to select music, dance, singing, song-writing and art direction.

**2 "3-dot" button:** will house filters that are not as crucial. *You can see the menu fully open by clicking on it or in the next wireframe.*

**2A "3-dot" button** with more filters: users may want to be more specific in their search to save time browsing through all the posts.

**3 Calls/Posts** will show the most important information "who-what-when," users will get more details by clicking on **Read more**, which will open the full post. *You can see the post fully open by clicking on it or in the next wireframe.*

**3A An example of an open call/post:** it includes all details, a description, attached music files and images that accompany the post. If users find it interesting and would like to respond, they can click on **Contact me** **4** and send a message. Some users might like to **Comment**. **5**

**6 Footer Menu:** includes a Footer Hamburger Menu, and a Share button, Posts/Calls page and a Profile page buttons in the form of icons. *You can see the Hamburger Menu fully open by clicking on it or in the next wireframe.*

**6A Footer Hamburger Menu** fully open
